Office Action Summary

Serial No. 710,902
Art Unit 2882

-2-

Restriction to one of the following inventions is required under 35 U.S.C. § 121:

I. Claims 6-9, drawn to an x-ray source support, classified in Class 378, subclass 196.

II. Claims 1-5 and 10-12, drawn to an examination table, classified in Class 5.

The inventions are distinct, each from the other because of the following reasons:

Inventions I and II are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations. (M.P.E.P. § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because the x-ray source need not be directly coupled to the table. The subcombination has separate utility such as non x-ray examinations.

Because these inventions are distinct for the reasons given above and because they have acquired a separate status in the art as indicated by their different classifications, restriction for examination purposes as indicated is proper.

Applicant is advised that the response to this requirement to be complete must include an election of the invention to be
